

Skynet

Verifiable Precision for Modern Agriculture

Making every acre of drone application accountable through hardware-verified, tamper-proof audit trails.

| The "Trust Gap" in Precision Farming

Invisible Efficacy

Farmers pay for drone spraying but have no objective proof that the entire field was covered evenly.

Wasted Inputs

Over-spraying leads to chemical waste and crop damage; under-spraying results in pest outbreaks.

| The PCVM: The Drone "Black Box"

PCVM Gen-1

A rugged, universal hardware module that captures raw GNSS data directly from the aircraft's path.

Tamper-Proof Logs

Edge-encrypted flight trails that cannot be altered, providing a secure "Proof-Packet" for every mission.

Verified Audits

Automated reporting that aligns flight paths with field boundaries to calculate true coverage percentage.

| Hardware-First Integrity

Centimetre-Accurate Tracking

Utilizing multi-constellation GNSS (GPS + GLONASS) with optional RTK correction to deliver sub-meter precision in every sortie.

- ✓ **Offline-First:** Logs data locally in connectivity-starved rural zones.
- ✓ **Universal Mount:** Plug-and-play integration with any 10L-20L spray drone.
- ✓ **Secure Hash Chain:** Cryptographically verified session logs.

 IoT Module

MARKET ANALYSIS

Scaling Trust at Acre-Level

| Unlocking the Scaling DaaS Market

₹8.5B+

INDIAN DRONE SERVICE MARKET

Explosive Growth

As Farmer Producer Organizations (FPOs) adopt drones to solve labor shortages, the need for **standardized service verification** becomes the primary barrier to scale.

By capturing just 10% of the verification market in key clusters like Tamil Nadu, Skynet addresses a multi-crore opportunity in operational auditing.

| Value-Based Revenue Streams

Per-Acre Verification

Micro-fee for every verified spray packet issued to farmers via the Skynet platform.

FPO Enterprise

Subscription model for organizations to audit large fleets and fragmented landholdings.

Data Services

Aggregated, anonymous spray metadata for chemical companies to monitor input efficacy.

Why Skynet Wins

Capability	Mobile App Logs	Standard Telemetry	Skynet PCVM
Verification Method	Software-Only	Cloud-Dependent	Hardware-Encrypted
Data Integrity	Easily Manipulated	Inconsistent	Tamper-Proof Hash
Connectivity	Requires 4G/5G	Real-time Only	Offline Edge Storage
Boundary Alignment	Manual	Basic Overlay	Auto KMZ Validation

| Path to Commercial Launch

Validation & Real-World Impact

"If the pilot provides this map as proof, I am ready to pay a premium for the service. It takes the guesswork out of my crop health."

— Leading Farmer Producer Organization (FPO),
Coimbatore

Our pilot feedback indicates a **20% higher willingness to pay** for drone services that include a hardware-verified audit trail.

 Dashboard on Tablet

| The Minds Behind Skynet

Multi-Disciplinary Expertise

Our team combines deep experience in Embedded Systems, Drone Operations, and Agricultural Science to solve the industry's toughest trust problem.

- **Lead Innovator:** Hardware Architecture & IoT Security.
- **Firmware Lead:** RTOS & GNSS Data Processing.
- **Agri-Ops Expert:** DaaS Field Strategy & FPO Liaison.
